GCMW 102: WEB PAGE LAYOUT

Practice Simulation 4

For Simulation 4, the basic design has already been created for a six page site using a Dreamweaver template and CSS styles. You will modify the existing template and CSS files where necessary to recreate the example on the following pages (high resolution jpgs are available in the Practice Simulation 4 folder).

Template Page:

- Add the body-bkg.gif to the body tag
- Place the back-home.png image as a background in the #header div
- Create a vertical list based navigation menu in the #left column div
- Create rollover effects on the menu by using the nav-bkg.jpg image for the <a> tag, and the nav-bkg-ovr.jpg for the a:hover selector

Cupcakes-Weekly Page:

- Add content from weekly-update.html and style it like all the other pages

Cupcakes-Everyday Page & Cupcakes Weekly Page:

- Create a class selector to control the float and clear properties so that the text for each cupcake image wraps around the right edge. Include padding and margins as necessary so text does not site up right next to the image

Join-The-Club Page:

- Insert a form as the example
- Include a checkbox, text fields for first name, last name, company name, email, password, a menu field with a list of all twelve months of the year, a submit button named "Sign me up!" and a reset button. Use CSS to style the form as per the example.

Make sure all pages have a title, are properly linked, and the site uploaded to the student. server.
